

Helping babies communicate before they can talk

Did you know, babies can sign back as early as 6 months old?

As a parent or carer, it can be incredibly frustrating when your baby or toddler is upset and crying, and you don't know why. Learning Signalong For Babies before speech develops can help you better understand your baby's needs and wants.

Signalong for Babies was developed after Signalong was inundated with requests to develop a recognised, consistent method of producing signs using Signalong.

Signalong for Babies Courses provide a fun and relaxed way to introduce signing to little ones aged six to eighteen months. With small group sizes, our Trainers are able to give plenty of individual attention and support to each participant.

The course is delivered over eight weeks where you'll learn 106 key signs and popular nursery rhymes.

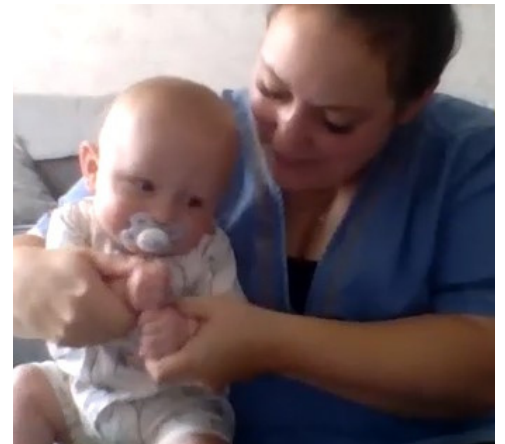

The Benefits of Signing with Your Baby

- Strengthens the bond between you and your baby
- Gives your baby a voice before they can speak
- Boosts language development
- Reduces frustration, for both you and your baby

By giving your baby, the tools to express their wants and needs before they can speak, you reduce frustration and build a stronger emotional bond. If you later discover your child has an identified speech, language, or communication need, you've already laid the foundation for an Augmentative and Alternative Communication (AAC) system, giving them a head start.

Over 8 weeks, you'll receive a set of 8 Learning Cards and learn 106 signs appropriate to the most common needs and objects for babies 9-18 months old, along with popular nursery rhymes. You'll also have the opportunity to discuss your baby's milestones and explore early speech, language, and communication needs with your Trainer.
